

Application of the InventaCinema approach
in a town centre regeneration project

Low-carbon • Modular • Affordable • Neighbourhood

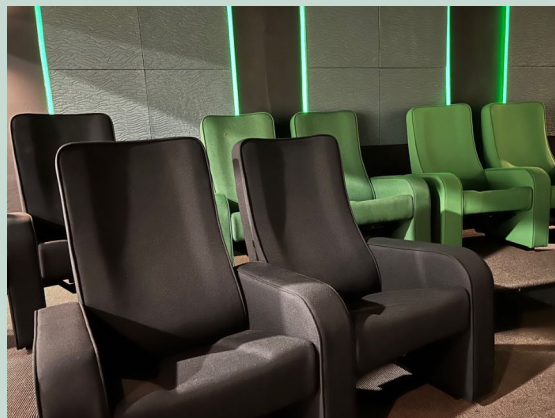

InventaCinema is the brand name for a net zero carbon negative modular cinema. It has been developed by InventaCinema Ltd in collaboration with Agile Properties and Homes Ltd and is described in the accompanying brochure.

The purpose of this brochure is to illustrate the application of the approach to the development of an independent cinema in response to an operator brief and forming part of a wider mixed use regeneration project in the centre of a market town. For reasons of client confidentiality the location is not disclosed.

The Agile Build System is certified for a 60 Year Design Life. The structural envelope of the InventaCinema is a unique, load-bearing, carbon-negative pre-fabricated building system, that combines super-insulating renewable materials with exceptional acoustic performance.

The InventaCinema structure is modular, with each cinema space being a discrete structural 'box' allowing the same structural system to be used in a variety of combinations.

Ferco St Omer seating

The illustration above shows an application of the InventaCinema approach to meet a cinema operator brief for a 3 screen cinema with a café bar and first floor terrace on a town centre site forming part of a mixed use regeneration project.

All elements of the fit out have been selected to contribute to the decarbonisation strategy, while meeting the expectations of a modern cinema going audience and operator. All auditoria are fitted with laser projectors and Dolby 7.1 sound. The Dolby Atmos immersive sound system can be added as an option at extra cost.

The InventaCinema approach

The InventaCinema concept offers **benefits** to clients and communities seeking to provide a neighbourhood cinema in underserved rural, small town and periphery of city areas.

The **Lean Clean Green** energy strategy underpinning InventaCinema reduces embodied and operational carbon, compared with a conventional model of cinema development.

The **modular** approach allows different combinations of screen size and seating capacity to be tailored to local demand and site capacity, while benefiting from the cost benefits of the offsite fabrication of a kit of parts.

An InventaCinema is offered at a **predictable price**, removing the development risk to the client and providing a cost effective alternative to conventional cinema development.

An InventaCinema provides a welcoming and accessible **leisure and social hub in the heart of the community.**
